EDUCATION

COMSATS University Islamabad

B.S. in Computer Science
CGPA: 3.89/4.0

Burewala, Pakistan

Expected Graduation: January 2028

Relevant Coursework: Data Structures, Object-Oriented Programming, Operating Systems, Computer Networks, Database Management Systems, Design and Analysis of Algorithms, Web Technologies, Mobile Application Development, Artificial Intelligence

PROJECTS

Project Name: AI Meal Planner and Calorie Scanner App | Flutter, Dart, ML Image Recognition, SQLite

June 2026 | <https://github.com/Sumreen-SF/ai-meal-planner-calorie-scanner>

- Built a cross-platform mobile app using Flutter that generates personalized meal plans and tracks daily caloric intake
- Implemented a camera-based food recognition feature using a TFLite model to identify food items from images and auto-estimate calorie content, and OpenRouter's API key for estimating calories of the food typed by the user
- Designed local data persistence using SQLite/Hive to store meal logs and user preferences offline, with no backend dependency

Project Name: Task Manager App | Flutter, Dart, SQLite, flutter_local_notifications

April 2026 | <https://github.com/Sumreen-SF/task-manager-app>

- Built a full-featured task management app supporting subtasks with progress tracking, recurring tasks (custom day-of-week scheduling), and a completed-tasks archive
- Implemented local notifications using flutter_local_notifications with customizable alert sounds and scheduled reminders for recurring tasks
- Designed light/dark theme support and persisted all task data locally using SQLite, ensuring full offline functionality

Project Name: Personal Portfolio Website | HTML5, CSS3, JavaScript

June 2026 | <https://sumreen-fatima.netlify.app/>

- Designed and built a fully responsive personal portfolio from scratch (no templates), featuring a custom hand-coded design system, scroll-triggered animations, and an interactive cursor
- Implemented a working contact form using the Formspree API, enabling direct email delivery without a backend server
- Deployed live on Netlify with a custom domain, ensuring fast load times and full cross-device responsiveness

Project Name: SkyCast Weather App | Flutter, Dart, OpenWeatherMap API

May 2026 | <https://github.com/Sumreen-SF/skycast-weather-app>

- Built a Flutter weather app that re-themes its entire UI, gradients, color palette, and hand-painted weather animations, to match real-time conditions, using custom CustomPainter graphics instead of GIF or Lottie assets
- Integrated the OpenWeatherMap API for live conditions, 24-hour/7-day forecasts, and air quality data, with GPS-based location and city search via Geolocator
- Designed rule-based advisory features, outfit recommendations, and student commute/ study-window alerts, derived from real-time weather and time-of-day logic

TECHNICAL SKILLS

Languages: Java, C++, Python, JavaScript, PHP, Dart, SQL

Web Technologies: HTML5, CSS3, PHP (course projects)

Mobile: Flutter (Android Studio)

Tools & Platforms: Git, Android Studio, VS Code, SQL

Concepts: Data Structures & Algorithms, REST APIs, Database Design
